DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows: Cancel claims 2-5 which are directed to a non-elected invention.

Allowable Subject Matter

Claims 1 and 6 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art of record does not disclose that when the output of the limiting amplifier has a frequency less than or equal to 30 Hz and an amplitude less than or equal to the specified output signal amplitude threshold, the limiting amplifier has constant gain and when the output of the limiting amplifier has a frequency less than or equal to 30 Hz and an amplitude greater than the specified output signal amplitude threshold, the limiting amplifier has a gain which is adjusted in accordance with a size of an input signal, as required by claims 1 and 7. Twiney discloses a limiting amplifier comprising voltage limiting circuit 76. However, there is no disclosure nor suggestion that the gain is constant under 30 Hz and variable above 30 Hz. Newly cited reference Blind et al, US Patent 5,469,510 disclose a power limiter as part of an active noise cancellation module 22. There is no disclosure of a frequency threshold (30 Hz) whereby gain is constant below the threshold and variable above it, as claimed by the Applicant.
